Collected Knowledge & Wisdom on

EDAMAM Recipe Search API

Provides:

API provides recipes given food name and various nutritional constraints.

Key Provisioning:

Pain factor (*0=ezpz...5=nightmare*): **2**

- Requires user to make an account with EDAMAM
- User prompted to generate an id and a key for access

Quotas:

- 5,000 a month

The Good:

- Useful for generating recipes given caloric/nutritional constraints.
- Code snippets available in documentation
- Easy to use and has a wealth of available recipes.
- Extensive nutritional breakdown per serving.

The Bad:

- Sometimes returns odd entries or those that deviate from input constraints.

The Ugly:

- Requires some food name to initiate search. Does not return random options given some caloric/nutritional input.
